263. F. RADON DISCLOSURE: (The following Seller disclosure satisfies MN Statute 144.496.)

264. RADON WARNING STATEMENT: The Minnesota Department of Health strongly recommends that ALL
265. homebuyers have an indoor radon test performed prior to purchase or taking occupancy, and recommends
266. having the radon levels mitigated if elevated radon concentrations are found. Elevated radon concentrations can
267. easily be reduced by a qualified, certified, or licensed, if applicable, radon mitigator.

268. Every buyer of any interest in residential real property is notified that the property may present exposure to
269. dangerous levels of indoor radon gas that may place occupants at risk of developing radon-induced lung cancer.
270. Radon, a Class A human carcinogen, is the leading cause of lung cancer in nonsmokers and the second leading
271. cause overall. The seller of any interest in residential real property is required to provide the buyer with any
272. information on radon test results of the dwelling.

273. RADON IN REAL ESTATE: By signing this Statement, Buyer hereby acknowledges receipt of the Minnesota
274. Department of Health's publication entitled Radon in Real Estate Transactions, which is attached hereto and
275. can be found at www.health.state.mn.us/communities/environment/air/radon/radonre.html.

276. A seller who fails to disclose the information required under MN Statute 144.496, and is aware of material facts
277. pertaining to radon concentrations in the Property, is liable to the Buyer. A buyer who is injured by a violation of MN
278. Statute 144.496 may bring a civil action and recover damages and receive other equitable relief as determined by
279. the court. Any such action must be commenced within two years after the date on which the buyer closed the
280. purchase or transfer of the real Property.

281. SELLER'S REPRESENTATIONS: The following are representations made by Seller to the extent of Seller's actual
282. knowledge.

Radon in Real Estate Transactions

All Minnesota homes can have dangerous levels of radon gas. Radon is a colorless and odorless gas that comes from the soil. The gas can accumulate in the home. When inhaled, its radioactive particles can damage the lungs. Long-term exposure to radon can lead to lung cancer. About 21,000 lung cancer deaths each year in the United States are caused by radon.

The only way to know how much radon gas has entered the home is to conduct a radon test. MDH estimates 2 in 5 homes exceed the 4.0 pCi/L (picocuries per liter) action level. Whether a home is old or new, any home can have high levels of radon.

The purpose of this publication is to educate and inform potential home buyers of the risks of radon exposure, and how to test for and reduce radon as part of real estate transactions.

Disclosure Requirements

Effective January 1, 2014, the Minnesota Radon Awareness Act requires specific disclosure and education be provided to potential home buyers during residential real estate transactions in Minnesota.

Before signing a purchase agreement to sell or transfer residential real property, the seller shall provide this publication and shall disclose in writing to the buyer:

1. whether a radon test or tests have occurred on the property
2. the most current records and reports pertaining to radon concentrations within the dwelling
3. a description of any radon levels, mitigation, or remediation
4. information on the radon mitigation system, if a system was installed
5. a radon warning statement

Radon Facts

How dangerous is radon? Radon is the number one cause of lung cancer in nonsmokers, and the second leading cause overall. Your risk for lung cancer increases with higher levels of radon, prolonged exposure, and whether or not you are a current smoker or former smoker.

Where is your greatest exposure to radon? For most Minnesotans, your greatest exposure is at home where radon can concentrate indoors.

What is the recommended action based on my results? If the average radon in the home is at or above 4.0 pCi/L, the home's radon level should be reduced. Also, consider mitigating if radon levels are between 2.0 pCi/L and 3.9 pCi/L. Any amount of radon, even below the recommended action level, carries some risk. A home's radon levels may change in the future, so test every 2–5 years, or sooner if there is major remodeling or changes to the foundation, heating, cooling, or ventilation.

Radon Warning Statement

“The Minnesota Department of Health strongly recommends that ALL home buyers have an indoor radon test performed prior to purchase or taking occupancy, and recommends having the radon levels mitigated if elevated radon concentrations are found. Elevated radon concentrations can easily be reduced by a qualified, certified, or licensed, if applicable, radon mitigator.

Every buyer of any interest in residential real property is notified that the property may present exposure to dangerous levels of indoor radon gas that may place the occupants at risk of developing radon-induced lung cancer. Radon, a Class A human carcinogen, is the leading cause of lung cancer in nonsmokers and the second leading cause overall. The seller of any interest in residential real property is required to provide the buyer with any information on radon test results of the dwelling.”

Radon Testing

Any test lasting less than three months requires **closed-house conditions**. Closed-house conditions include keeping all windows and doors closed, except for normal entry and exit, and temperature set to 65 – 80 °F. For a full list of closed-house conditions please visit mn.gov/radon/notice.

Before testing: Begin closed-house conditions at least 12 hours before the start of the radon test.

During testing: Maintain closed-house conditions during the entire duration of the short-term test. Operate home heating or cooling systems normally during the test.

Where should the test be conducted? Any radon test conducted for a real estate transaction needs to be placed in the lowest livable area of the home suitable for occupancy. This is typically in the basement, whether finished or unfinished. If other foundations are present, such as a crawl space or slab on grade, also test the rooms above these foundations.

Place the test kit:

- 20 inches to 6 feet above the floor
- 3 feet from exterior doors and windows
- 1 foot from exterior walls
- away from heat sources and drafts caused by vents and fans
- not in enclosed areas or areas of high heat/humidity

How are radon tests conducted in real estate transactions?

There are special protocols for radon testing in real estate transactions. Because these tests are time-sensitive there are two testing options. For both tests, test for a minimum of 2 days.

Continuous Radon Monitor (CRM)

MDH recommends CRMs in real estate testing. CRMs are calibrated, provide more data, and may detect tampering. The average of the results are used to make a decision to mitigate.

Simultaneous Short-Term Testing

Two short-term test kits are placed side by side, 4” – 8” apart. The results of the two tests are averaged and used to make a decision to mitigate.

Radon Mitigation

When elevated levels of radon are found, they can be easily reduced by a licensed professional.

Radon mitigation is the process or system used to reduce radon concentrations in the breathing zones of occupied buildings. The goal of a radon mitigation system is to reduce the indoor radon levels to below the action level. This is done by drawing soil gas from under the house and venting it above the roof. A quality mitigation system is often able to reduce the annual average radon level to below 2.0 pCi/L. The cost of a radon mitigation system averages \$1,500 to \$3,000.

After a radon mitigation system is installed perform an independent short-term test to ensure the reduction system is effective. Operate the radon system during the entire test. This short-term test will confirm low levels in the home. Be sure to retest the house every two years to confirm continued radon reduction.

All radon testing and mitigation should be conducted by licensed radon professionals. Radon service providers, such as home inspectors, must be licensed. A list of these licensed radon professionals can be found at MDH’s radon web site. MDH conducts free inspections, upon request, of recently installed radon mitigation systems, to check that they meet requirements.

5. Minnesota Statute 103I.235 requires that, before signing an agreement to sell or transfer real property, Seller must disclose information in writing to Buyer about the status and location of all known wells on the property. This requirement is satisfied by delivering to Buyer either a statement by Seller that Seller does not know of any wells on the property, or a disclosure statement indicating the legal description and county, and a map showing the location of each well. In the disclosure statement Seller must indicate, for each well, whether the well is in use, not in use or sealed.

10. Unless Buyer and Seller agree to the contrary in writing, before the closing of the sale, a Seller who fails to disclose the existence or known status of a well at the time of sale, and knew or had reason to know of the existence or known status of the well, is liable to Buyer for costs relating to sealing of the well and reasonable attorneys' fees for collection of costs from Seller, if the action is commenced within six years after the date Buyer closed the purchase of the real property where the well is located.

15. Legal requirements exist relating to various aspects of location and status of wells. Buyer is advised to contact the local unit(s) of government, state agency, or qualified professional which regulates wells for further information about these issues. For additional information on wells, please visit the Minnesota Department of Health's website at www.health.state.mn.us.

66. **DEFINITION:** A “well” means an excavation that is drilled, cored, bored, washed, driven, dug, jetted, or otherwise
 67. constructed if the excavation is intended for the location, diversion, artificial recharge, or acquisition of groundwater.

68. **MINNESOTA UNIQUE WELL NUMBER:** All new wells constructed AFTER January 1, 1975, should have been
 69. assigned a Minnesota unique well number by the person constructing the well. If the well was constructed after this
 70. date, you should have the unique well number in your property records. If you are unable to locate your unique well
 71. number and the well was constructed AFTER January 1, 1975, contact your well contractor. If no unique well number
 72. is available, please indicate the depth and year of construction for each well.

73. **WELL TYPE:** Use one of the following terms to describe the well type.

74. **WATER WELL:** A water well is any type of well used to extract groundwater for private or public use.
 75. Examples of water wells are: domestic wells, drive-point wells, dug wells, remedial wells, and municipal
 76. wells.

77. **IRRIGATION WELL:** An irrigation well is a well used to irrigate agricultural lands. These are typically
 78. large-diameter wells connected to a large pressure distribution system.

79. **MONITORING WELL:** A monitoring well is a well used to monitor groundwater contamination. The well is
 80. typically used to access groundwater for the extraction of samples.

81. **DEWATERING WELL:** A dewatering well is a well used to lower groundwater levels to allow for construction
 82. or use of underground spaces.

83. **INDUSTRIAL/COMMERCIAL WELL:** An industrial/commercial well is a nonpotable well used to extract
 84. groundwater for any nonpotable use, including groundwater thermal exchange wells (heat pumps and heat
 85. loops).
